LEGAL NOTICES

1. In India, there are laws dealing with certain substances which are the subject of the specifications of formulations included in the Ayurvedic Formulary of India. These specifications should be read subject to the restrictions imposed by those wherever they are applicable.
2. It is expedient that enquiry be made in each case in order to ensure that the provisions of any law are being complied with.
3. In general, the Drugs and Cosmetics Act, 1940; the Dangerous Drugs Act, 1930; the Poisons Act, 1919; Drugs and Magic Remedies (Objectionable Advertisement) Act, 1954; the Narcotic Drugs and Psychotropic Substances Act, 1985 and the Biodiversity Act, 2002; all as amended from time to time, alongwith the Rules framed thereunder, should be consulted to ensure that the provisions of such laws are being complied with.
4. Standards for the several single drugs of plant, animal and mineral origin included in the Pharmacopoeial List of Single Drugs included as an Appendix to the Ayurvedic Formulary have yet to be worked out. In the manufacture of medicines included in this Formulary, it should be ensured that the Vaidya-in-charge of the Pharmacy has reasonably satisfied himself about the identity and purity of the drugs.
5. Use of Substitute drugs (*Pratinidhi dravyas*), wherever the original drugs are not available, is permissible in the Ayurvedic classics and practice. It must, however, be ensured that only the substitutes as are mentioned in the texts or included in the Formulary are used. **The main ingredients of the formulation should not be allowed to be substituted as per references available in approved ayurvedic books.**
6. Formulations included in the Ayurvedic Formulary may also be manufactured as per formulae given in various Ayurvedic Classics. The Ayurvedic Formulary has, however, included the most commonly accepted Formulae for the medicinal preparations included therein. It does not however preclude the Ayurvedic Pharmaceutical industry and the practitioners from manufacturing medicines on the basis of other formulae. But should the medicines be prepared according to the reference mentioned in the formulary, deviation in the details of the ingredients or their quantities is not permissible.
7. Under the Drugs and Cosmetics Act, the Ayurvedic Formulary of India, represented by its Parts is the book of standards for substances included therein and such standards are official. If considered necessary, these standards can be amended and only the Pharmacopoeia Commission for Indian Medicine & Homoeopathy on behalf of Ministry of AYUSH, Government of India is authorised to issue such amendments. Whenever such amendments are issued, the specific Ayurvedic Formulary of India intended thereby would be deemed to have been amended accordingly.

DRAFT

GENERAL NOTICES

Title: The title of the book is “Ayurvedic Formulary of India, Part-IV (Veterinary)”. Wherever the abbreviation “AFI, Pt.-IV, (Veterinary)” is used, it stands for the same and for the Supplements or Amendments thereto.

Names of Drugs, Preparations and other Substances

Name of the Formulation: The name given on top of each monograph is in *Saṃskṛta* as mentioned in the Āyurveda texts being referred for preparation of this part of Ayurvedic Formulary of India (AFI) and will be considered as *Official*. The term “Veterinary” has been suffixed in parenthesis to the name of each formulation included in this said part of AFI, to restrict the usage of these formulations for Veterinary use only. This also helps to avoid any possible conflict regarding the same nomenclature to the formulation/s indicated for human beings. These names have been arranged in alphabetical order in English under each category of dosage forms.

Official: All names of drugs, formulations and processes mentioned in the Formulary will be deemed to be Classical and would be synonymous with the word “Official” and apply to any statement included in the General Notices, Monographs and Appendices of the Formulary.

Methods of Preparation: The General Method of Preparation has been given immediately preceding the individual Groups of Formulations. When there is a statement in the body of a monograph of the formulation that a substance will have to be prepared by a certain method, it indicates that the general method is modified to that extent. In some cases, there are more than one methods of preparation and new methods are constantly being evolved. What is intended is that, irrespective of the method of preparation, the resulting substances must comply with Formulary requirements.

Ingredients and Processes: Formulations are to be prepared from individual ingredients that comply with the requirements for those individual ingredients for which monographs are provided in the volumes of Ayurvedic Pharmacopoeia of India (API), Part-I. Where *Water* is used as an ingredient, it should meet the requirements for *Jala* (Potable water) covered by its monograph in the, API, Part-I, Vol.-VI, unless specified otherwise. In general, all the ingredients used are required to be free from insects, other foreign matter, from animal excreta, and to show no abnormal odour, colour, sliminess, mould or other evidence of deterioration.

Specification for each Formulation includes its full composition together with special directions for its preparation if any. Such composition and directions are intended for preparation of small quantities for short-term supply and use. When so prepared, no deviation from the stated composition and directions is permitted. However, if such a preparation is manufactured on a large scale with the intention of sale or distribution, deviations from the directions given are permitted, provided that the same ratio is maintained as stated in the specification, with the ingredients complying with its compendial requirements, and also ensuring that the final product complies with all of the requirements stated in the Formulation Composition for the specific formulation.

If a preparation is intended to be stored over a period of time, deterioration due to microbial contamination may be inhibited by the addition to the formulation of a permitted preservative.

In such circumstances, the label should state the name of the preservative and the appropriate storage conditions.

Formulary Specification: Each Specification begins with quoting the source reference followed by the Formulation Composition giving the scientific names of the drugs and respective form of the ingredient

intended to be entered to the formulation alongwith a brief account of the Method of Preparation if needed. For drugs of plant origin, the part used has also been specified.

The form and quantity/proportion of each ingredient mentioned in the Formulation composition are as intended to be entered to the formulation after whatever processing intended. It is the onus of manufacturer to ensure addition of exact quantity/proportion of each ingredient to the Formulation and shall not be mistaken with the quantity/proportion of the raw material as such.

Standards: For statutory purposes, unless otherwise specified, the following shall be considered *Official Standards*: Title i.e. Name of Formulation and Formulation Composition.

Capital Letters in the Text: The names of the Pharmacopoeial substances, preparations and other materials in the text are printed in capital initial letters and these infer that materials of Pharmacopoeial quality have been used.

Italics: Italic types are used for Scientific names of the plant drugs and microorganisms, and for some sub-headings and certain notations of the chemical names. Italic types have also been used for words which refer to solvent system in TLC procedure, reagents and substances, processes covered under Appendices. Chemicals and Reagents and Substances of Processes in Appendices have also been printed in Italics.

Powders: Ingredients added to a formulation are often required to be comminuted to various sizes ranging from very coarse to very fine, depending on their use in a formulation. Where they are added as '*prakṣepa dravyas*' to processed formulations, the size of sieve restricting the particle size is given in the monograph, but does not constitute an analytical standard. But where formulations are themselves powders, or where extracts are prepared either as solids (*Ghanasattva*) or liquids/*kvāthas*, particle size is an analytical standard and limits are recommended in the monographs, as follows:

Kvātha cūrṇa: Keeping the traditional practice of '*yavakūṭa*' as the size range for such formulations, the standard is as follows: 'All particles shall pass through 710 µm IS Sieve (sieve number 22), and not more than 10 per cent through 355 µm IS Sieve (sieve number 44). The product will be in the form of coarse powder from which extemporaneous preparations of *Kvāthas* (decoctions) by patients themselves can be recommended.'

Cūrṇa: This is administered as powder to be swallowed with a vehicle and should neither be so fine as to choke the throat of the patient, or so coarse or splintery to hurt the patient. Following this logic, the particle size is as follows: 'All particles shall pass through 355 µm IS Sieve (sieve number 44) and not less than 50 per cent through 180 µm IS Sieve (sieve number 85)'.

Bhasma: Since this is a very fine powder according to traditional practice, (*rekhāpūrnatva*), the limits are, 'All the particles shall pass through 53 µm IS Sieve (sieve number 300)'.

The particle sizes are given in terms of sieve sizes using the latest revision of the Bureau of Indian Standards (BIS) sieve sizes, and for the users' convenience, the equivalents or nearest equivalent number of the earlier BIS have also been given in the relevant Appendix.

Dose: Doses mentioned in this Formulary are intended merely for general guidance and represent, unless otherwise stated, the average range of quantities per dose, which are generally regarded as suitable for adult animals (Elephant/Horse as the case may be) when administered orally. The dose prescribed is for an average adult horse if the formulation reference is from *Aśvavaidyakam* or *Aśvacikitsitam*, while it is for an average adult elephant if the formulation reference is from *Hastyāyurveda* or *Karikalpalatā*. It is not to be regarded as binding upon the prescribers. The doses may in many cases be repeated three to four times in 24 hours. The medical practitioner will exercise own judgment and act on own responsibility in

respect of the amount of any therapeutic agent he/she may prescribe or administer or the frequency of its administration. When, however an unusually large dose appears to have been prescribed, it shall be the duty of the pharmacist or dispenser to satisfy himself/herself that the prescriber's intention has been correctly interpreted. If it is necessary to administer a drug by a route other than oral, single dose for such administration is mentioned.

Doses are expressed in the metric system of weights or measures. A conversion table is appended to this part of Ayurvedic Formulary giving the classical Ayurvedic System of weights and measures as per the Āyurveda texts referred.

It is to be noted that the relation between the doses in metric and Ayurvedic Systems set forth in the text is of only approximate equivalence. These equivalents are for the convenience of the prescriber and are sufficiently accurate for pharmaceutical or other purposes.

Weights and Measures: In the Formulary, only the metric system of weights and measures is indicated.

Liquid measures are given in multiples or fractions of millilitre. The term 'ml' is used as short designation for the millilitre.

When the term 'drop' is used, the measurement is to be made by means of a tube which delivers 1 gram of distilled water at 15°C, in 20 drops.

Metric measures are required by the Formulary to be graduated at 25°C, and all measurements involved in the analytical operations of the Formulary are intended, unless otherwise stated, to be made at that temperature.

Storage: Statement under the heading 'Storage' constitutes non-mandatory advice. The substances and preparations are to be stored under conditions that prevent contamination and, as far as possible, deterioration. The container and its closure must not interact physically or chemically with the substance which it holds so as to alter the strength, quality or purity of the substance. If interaction is unavoidable, the alteration must not be so significant as to bring the substance below the prescribed requirements. Precautions that should be taken in relation to the effects of the atmosphere, moisture, heat and light are indicated, where appropriate, in the individual monographs.

Specific directions are given in the monograph with respect to the temperatures at which Pharmacopoeial articles should be stored, where it is considered that storage at a lower or higher temperature may produce undesirable results. The conditions are defined by the following terms.

Cold: Any temperature not exceeding 8° and usually between 2° and 8°. A refrigerator provides a cold place in which the temperature is maintained thermostatically between 2° and 8°.

Cool: Any temperature between 8° and 25°. An article for which storage in a cool place is directed may, alternately, be stored in a refrigerator, unless otherwise specified in the individual monograph.

Room temperature: The temperature prevailing in a working area

Warm: Any temperature between 30° and 40°

Excessive heat: Any temperature above 40°

Protection from freezing: Where, in addition to the risk of breaking of the container, freezing results in loss of strength or potency or in destructive alteration of the characteristics of an article, the label on the container bears an appropriate instruction to protect from freezing.

Storage under non-specific conditions: Where no specific storage directions or limitations are given in the individual monograph, it is to be understood that the storage conditions include protection from moisture, freezing and excessive heat.

Containers: The container is the device that holds the article. The immediate container is that which is in direct contact with the article at all times. The closure is a part of the container.

The container is designed so that the contents may be taken out for the intended purpose in a convenient manner.

It provides the required degree of protection to the contents from environmental hazards.

The container should not interact physically or chemically with the article placed in it so as to alter the strength, quality or purity of the article beyond the official requirements.

Prior to its being filled, the container should be clean. Special precautions and cleaning procedures may be necessary to ensure that each container is clean and that extraneous matter is not introduced into or onto the container.

Light-resistant Container: A light resistant container protects the contents from the effects of actinic light by virtue of the specific properties of the material of which it is made. Alternatively, a clear and colourless or a translucent container may be made light-resistant by means of an opaque (light-resistant) covering and/or stored in a dark place: in such cases, the label on the container should bear a statement that an opaque covering or storage in dark place is needed until the contents have been used up.

Well-closed Container: A well-closed container protects the contents from extraneous contamination and from loss of contents under normal conditions of handling, shipment, storage and distribution.

Tightly-closed Container: A tightly-closed container protects the contents from contamination by extraneous liquids solids or vapours, and from loss or deterioration of contents from effervescence, deliquescence or evaporation under normal conditions of handling, shipment, storage and distribution.

Single Unit Container: A single unit container is one that is designed to hold a quantity of the drug product intended for administration as a single finished device intended for use immediately after the container is opened. The immediate container and/or outer container or protective packaging is so designed as to reveal evidence of tampering, if any.

Multiple Unit Container: A multiple unit container is a container that permits withdrawals of successive portions of the contents without changing the strength, quality or purity of the remaining portion.

Tamper-evident Container: A tamper-evident container is fitted with a device or mechanism that reveals irreversibly whether the container has been opened.

Labelling: In general, the labelling of drugs and pharmaceuticals is governed by the Drugs and Cosmetics Act, 1940 and Rules thereunder.

DRAFT

PROLOGUE

The veterinary medicine is known as a system of medicine prescribed for use in animals. The use of natural substances as medicine in animals is not new in our country. Since dawn of the civilization, animals were the facilitators of various activities in daily life at home and outside the home to perform day-to-day activities. Cows, Elephant and Horses were the commonest animals to be the part of social and family life in the society since times immemorial. The Horses were kept healthy to perform Aśvamedha Yajña as well as for their quick performance in the battle field; therefore, the need for a Veterinary physician was an essential requirement to keep them healthy. Similarly, the elephant was also the part of daily life and particularly during various rituals and festivals of the region specific besides being used in battle field; therefore, they were kept healthy and in case of becoming ill, medicinal substances were prescribed. The most common favorable domestic animal - Cow is known for the milk production in every one's life in particular and the society in general, hence, their care to make them healthy was important. A number of varieties of Cows are seen in India and their traditional health care through generation to generation is still in practice in rural India.

It is worthwhile to mention here that in different periods of time, a number of hand-written manuscripts were created to keep the records of the treatment methods for the different animals. Of them, considering the importance of the *Gaja* (Elephant), *Aśva* (Horse) and *Go* (Cow) in domestic life, branches of *Gajāyurveda/Hastyāyurveda*, *Aśvāyurveda* and *Gavāyurveda* were developed as per the references seen in Kalpasūtras as mentioned by P. V. Sharma in his book *Āyurveda kā Vaijñānika Itihāsa* (2011). According to him, Carakasamhitā, Siddhīsthāna refined portion by Dr̥ḍhabala, indicates that the treatment of Elephant, Cow, Horse, Camel, Goat etc. were in practice. Further he has stated that during Kauṭilya's times, specialized physicians for Cow, Horse and Elephant were available. The noted king Aśoka of Gupta period had nationwide facilities for Veterinary medicines.

On comprehensive survey of noted Libraries in India, it was found that the following works; on *Aśvavaidyakam* by Jayadatta, *Aśvaśāstra* by Nakulaare available. Similarly, *Pālakāpya*'s- *Hastyāyurveda* or *Gajaśāstram* is also available. Those texts were made available to the Sub-committee on Veterinary medicine constituted to begin the work. The first Sub-Committee was constituted on November 8, 2011 vide letter No. 5-81/2011/CCRAS/Tech./HQ/APC/3100 The Committee did their hard work and the important formulae were brought into the notice of the Ayurvedic Pharmacopoeia Committee and after profound discussions in the Committee Meetings, the following dosage forms were selected and incorporated in the present compendium. The formulations are *kvātha cūrṇa*, *cūrṇa*, *ghṛta*, *āsava*, *piṇḍa*, *kavala*, *taila*, *lepa*, *vati*, *netrapariseka* and *dhūpa*. In all, 50 formulations have found place in the present formulary. It is important to mention here that the dose is mentioned in accordance with the manuscript. However, in other animals, the formulations can be used in similar diseases with the advice of the Veterinary Physicians having experience in treating such animals.

I sincerely thank the previous Committees of the Ayurvedic Pharmacopoeia Committee for their fruitful discussion and inclusion of the relevant matter pertaining to veterinary medicine.

Chairman, APC

AVALEHA

DRAFT

DRAFT

1. AVALEHA

Definition

Avaleha is a semi-solid preparation of drugs, prepared with addition of jaggery, sugar or sugar-candy and boiled with prescribed drug juice or decoction.

Method of preparation

Those preparations generally have (1) *Drava-dravya - Kasāya* or other, (2) *Madhura dravya* - jaggery, sugar or sugar-candy dissolved in *drava-dravya* and filtered, (3) *Kalka dravya* - powders or pulps of certain drugs (4) *Ghee* and or oil and (5) *Prakṣepa dravya* - honey and others. The mixture of *drava-dravya*, solution is boiled with the *madhura dravya* over a moderate heat. When the *Pāka (Phāṇita)* is thready (*Tantuvat*), or when it sinks in water without getting easily dissolved, it should be removed from the fire. Thereafter, fine powders of *Prakṣepa dravya* are then added in specified quantities and stirred continuously as well as vigorously to form a homogenous mixture. *Ghee* or oil, if mentioned, is added while heat is applied. Honey, if mentioned is added when the preparation is cooled down to room temperature. Thus, the final preparation is made. When metals are mentioned, the *Bhasmas* of the metals are used. In the case of drugs like *Bhallātaka*, purified drugs alone are included in the preparation.

Characteristics

The characteristic feature of *Avaleha* is soft in consistency, neither hard nor thick fluid. The colour and smell depend on the drugs used in the formulation.

Preservation and Storage

The *Avaleha* should be kept in glass or porcelain jars or in metal container which does not react with it.

Section 2

ĀSAVA

Definition

Āsavas are medicinal preparations made by mixing the drugs in *svarasa*/powder form as specified, in an aqueous solution of sugar or jaggery, as the case may be, for a specified period of time, during which it undergoes a process of fermentation generating alcohol, thus facilitating the extraction of the active principles contained in the drugs. The alcohol, so generated, also serves as a preservative.

Method of preparation of Āsava

The required quantity of water, to which jaggery or sugar as prescribed in the formula is added, is boiled and cooled. This is poured into the fermentation pot, vessel or barrel. *Svarasa* and/or fine powders of the drugs mentioned in the formula are added. Wherever *svarasa* is specified, it forms the base of the formulation rather than water. At the end, *Dhātakī Puspa* (Flower of *Woodfordia fruticosa*), if included in the formula, should be properly cleaned and added. The mouth of the pot, vessel or barrel is covered with an earthen lid and the edges are sealed with clay-smeared cloth wound in seven consecutive layers. The container is kept under suitable environment like in a heap of paddy etc., to ensure that for the duration of fermentation, as far as possible, a constant temperature is maintained. After the specified period, the lid is removed, and the contents are examined to ascertain whether *Sandhāna* (process of fermentation) has been completed. The preparation is first decanted and then strained after two or three days. When the fine suspended particles settle down, it is strained again and bottled.

General precautions

If the fermentation is to be carried in an earthen vessel, it should not be new. Water should be boiled first in the vessel. Absolute cleanliness is required during the process. Each time, the inner surface of the fermentation vessel should be fumigated with *Pippalī Cūrṇa* (Powder of *Piper longum*) and smeared with ghee before the liquids are poured into it. (In large scale manufacture, wooden-vats, porcelain-jars or metal vessels may be used in place of earthen vessels).

Characteristics

The filtered Āsava should be clear without froth at the top. It should not become sour (*Cukra*). The preparation has the characteristic of aromatic alcoholic odour.

Storage

Āsavas should be kept in suitable well-stoppered bottles or jars.

10.	Dhātakī	<i>Woodfordia fruticosa</i>	Fl.		480 g

Dose: 1.440 l daily in single/divided doses

Anupāna: Jala

Important Therapeutic Uses: Tyagdoṣa, Koṣṭhakṛmi

Note: Since there is no method of preparation mentioned in the text, therefore as per the common procedure of Āsava preparation, the composition is indicated.

Section 3

CŪRNA

Definition

Cūrṇa is a fine powder of drug or drugs.

General Method of preparation

Drugs mentioned in the formulation(s) are cleaned and dried properly. They are finely powdered and sieved. Where there are a number of drugs in formulation(s), the drugs are separately powdered and sieved. Each one of them (powder) is weighed separately and mixed well together. As some of the drugs contain more fibrous matter than others, this method of powdering and weighing them separately, according to the formulation(s), and then mixing them together, is preferred. Salt, sugar, camphor etc., when mentioned are separately powdered and mixed with the rest at the end. *Hīṅgu* (Asafoetida) and salt should be roasted, powdered and then added.

Characteristics

The powder should not adhere together or become moist.

Storage

It should be kept in air tight container.

14. Gomūtra				Q.S. for Soaking

¹ Official substitute: Narasāra (Sal ammoniac); ² Official substitute: Saindhava Lavaṇa (Rock salt)

Dose: 144 g daily in single/divided doses

Anupāna: *Ariṣṭa* (*Nimba*) *Cūrṇa* (*Azadirachta indica* - bark) 144 g

Important Therapeutic Uses: Ajīrṇa

Method of Preparation: Soak powder of ingredients no. 1-10 in *Gomūtra* (cow's urine) during night and allow it to dry in sunlight in the daytime. Carry out such soaking in *Gomūtra* and drying in sunlight for three days and three nights. Mix the product so obtained with ingredients 11-13. Pound the mixture to produce a fine powder.

3:4 Haridrādi Kavala (Veterinary)

(Hastyāyurveda, Mahārogasthāna-1, Ānāhādhyāya-12: 148-152)

हरिद्रे त्रिफलां पाठां तथा मधुरसामपि ।
 करञ्जबीजं तेजोह्वां शृङ्गवरं च हिङ्गु च ॥
 पटोलीं च विशेषेण निष्कं कटुकमत्स्यकान् ।

Anupāna: Buttermilk

Important Therapeutic Uses: Viṣavikāra

4. DHŪPA

Definition

Medicines which are used in the form of smoke by burning of it are called *Dhūpa*.

Method of preparation

The drugs are made in the form of coarse powder and put on the fire to produce smoke.

Storage

Should be kept in air tight container.

DHŪPA				
	Formulation	Book & Chapter	Verse No.	Page No
1.	Trikaṭukādi Dhūpana (Veterinary)	Hastyāyurveda, Mahārogasthāna-1, Śirorogādhyāya-14	101

7.	Haridrā				

Dose: In sufficient quantity required for fumigation

Important Therapeutic Uses: Kṛmija Śiroroga

5. GHRTA

Definition:

Ghṛtas are preparations in which ghee is boiled with prescribed *Kaṣāyas* (decoctions) and *Kalkas* of drugs according to the formula. This process ensures absorption of the active therapeutic principles of the ingredients used.

General method of preparation:

1. There are generally three essential components for the preparation of *sneha* (*Ghṛta* or *Taila*) viz: -
 - (i) *Drava* (a liquid which may be one or more as *Kaṣāya*, *Svarasa*, *Dugdha*, *Mastu*, etc.)
 - (ii) *Kalka* (a fine paste of the drug(s))
 - (iii) *Sneha dravya* (*Ghṛta*, *Mūrchita Ghṛta*¹).
2. Generally, unless otherwise mentioned in the text if *Kalka* is one part by weight, *Sneha* should be four parts and the *Drava-Dravya* should be sixteen parts. Exceptions are:
 - (i) Where no *Drava* is prescribed, four parts of water are added to one part of *Sneha*; the *Kalka* should be one fourth the weight of *Sneha*.
 - (ii) Where *drava-dravya* is *Kvātha*, *Kalka* should be one-sixth of *Sneha*.
 - (iii) Where the *Drava Dravya* is *Svarasa*, *Kṣīra*, *Takra*, *Dadhi* etc. The *Kalka* should be one eighth of the *Sneha* and then 4 times water is also added for good *Pāka*.
 - (iv) Where the number of *Drava Dravyas* is four or less than four, each *Drava* has to be taken four times the weight of *Sneha*.
 - (v) Where the *Drava Dravyas* are 5 or more, each *Drava* should be equal in weight to the *Sneha*.
 - (vi) If in a preparation, no *Kalka* is prescribed, then the drugs used for preparation of the *Kaṣāya* may be used as *Kalka*.
3. The *Kalka* and the *Drava* are mixed together, *Sneha* is then added, boiled on mild fire and stirred well continuously so that the *Kalka* is not allowed to adhere to the vessel. Sometimes, the *Drava-Dravyas* are directed to be added one after another as the process of the boiling is continued till the *Drava Dravya* added earlier has evaporated.
4. When all the *Drava Dravyas* have evaporated the moisture in the *Kalka* will also begin to evaporate; at this stage, it has to be stirred more often and carefully to ensure that the *Kalka* does not stick to the bottom of the vessel. The *Kalka* is taken out of the ladle and tested from time to time to know the condition and stage of the *Pāka*.
5. There are three stages of *Pāka*²:
 - (i) *Mṛdu Pāka*,
 - (ii) *Madhyama Pāka* and
 - (iii) *Khara Pāka*.

In *Mṛdu Pāka*, *Kalka* is waxy and when rolled between the fingers, rolls like lac with slight sticking. In *Madhyama Pāka*, *Kalka* is soft, non-sticky and rolls between fingers and when put in fire burns without

any cracking noise. A further degree of heating leads to *Khara pāka*, which is slightly hard. Any further heating will lead to *Dagdha Pāka* and the *Sneha* becomes unfit for use.

6. In the *Sneha Kalpana Śarkara* if mentioned, is added in fine powder form to the final product when cool.

7. Where the *Pāka* is to be done with *Kvātha*, *Svarasa*, *Dugdha*, *Māṁsarasa*, etc. The *Pāka* is to be done with these dravas separately in the above order. The periods of *Pāka* with various *dravyas* should be as below:

- | | |
|--|--------|
| (i) <i>Kvātha, Āranāla, Takra</i> etc. | 5 days |
| (ii) <i>Svarasa</i> | 3 days |
| (iii) <i>Dugdha</i> | 2 days |
| (iv) <i>Māṁsarasa</i> | 1 day |

8. *Pātrapāka*: *Pātrapāka* is the process by which the *Sneha* is flavoured or augmented by certain soluble or mixable substances. The powders of the drugs are placed in the vessel containing *Sneha* and fairly warm *Sneha* is filtered.

9. *Mṛdupāka Sneha* is used for *Nasya*; *Madhyamapāka Sneha* is used for *Pāna*, *Vasti*, etc.; *Kharapāka Sneha* is used only for *Abhyāṅga*.

10. In the begining the boiling should be on mild fire and in the end also it should be only on mild (*Mṛdvagni*) fire.

11. Whenever *Lavanas* and *Kṣāras* are used in these preparations, they are added to the *Sneha* and then strained.

Characteristics:

The *Ghr̥ta* will generally solidify when cooled. It may depict the colour, odour and taste of the drug(s) used.

Storage:

Ghr̥tas are to be stored in glass or suitable containers.

Method of use:

Generally, the *Anupāna* for internal use, when not specified, is warm water or warm milk. The *Ghr̥ta* has to be taken after warming. This can be taken with the medium of other liquids also.

Dose: 256 g daily in single/divlided doses

Important Therapeutic Uses: Śvāsa, Kāsa, Hikkā, Galagaṇḍa

Note: Since the indications of the formulation viz. Pañcatikta Ghṛta and Dvitīya Pañcatikta Ghṛta are mentioned at the end of the Śloka, therefore, indications mentioned above are taken from the end of the Śloka.

6. KVĀTHA CŪRNA

Definition

Certain drugs or combination of drugs are made into coarse powder (*Yavakūṭa*) and kept for preparation of *Kaṣāya*. Such powders are called *Kvātha Cūrṇa*.

Method of preparation

Drugs are cleaned and dried. They are coarsely powdered to completely pass through 710 µm IS sieve (sieve number 22) and not more than 10 per cent pass through 355 µm IS sieve (sieve number 44), weighed as per formula, and then mixed well.

Characteristics

The characteristic features of *Kvātha Cūrṇas* are dried and coarsely powdered. *Kvātha Cūrṇa* can be used for preparing the *Kaṣāya*, *Hima*, *Phāṇṭa* etc.

Storage

It should be stored in air tight container and kept in dry, cool and dark place.

	Prakṣepa dravya				
3.	Madhu	Honey			1 part
4.	Sauvarcalā Lavaṇa	Black Salt		Cū.	1 part

Dose: 1 kg daily in single/divlided doses

Important Therapeutic Uses: Kāsa, Agnidīpana, Sarvaroga

- * Honey and *Sauvarcala Lavaṇa* (Black Salt) to be added at the time of administration
- * Quantity of Honey 1/8, 1/6 and 1/4 to be added in accordance with the *Vāta*, *Pitta* and *Kapha Doṣa* predominance respectively
- * *Sauvarcala Lavaṇa* is to be added in *Kvāṭha*

DRAFT

7. LEPA

Definition

Medicines in the form of a paste used for external application are called *Lepas*.

Method of preparation

The drugs are made into a fine powder. Before use on the body, they are mixed with some liquid or other medium indicated in each preparation and made into a soft paste. Water, Cow's urine, oil and *Ghrta* are some of the media used for mixing.

Storage

Lepa Cūrṇa should be stored in well closed air tight container.

DRAF

8. NETRAPARIŞEKA

Definition

Netraparişeka is procedure of pouring a stream of lukewarm medicinal fluid(s) continuously on the closed eyes for a prescribed period. The fluid can be in the form of *Kvātha* (decoction), *Taila* (oil) or *Ghrta* (clarified butter).

Method of preparation

The method may differ according to the form of medicinal fluid used for the procedure. Appropriate procedure for preparation of the medicinal fluid should be applied.

Storage

It should be stored in an air tight container.

7.	Kṣaudra (Madhu)	Honey			Q.S.

Specific Method of Preparation: Prepare *Kvātha* of ingredients No. 1-5 by boiling with ingredient No. 6, filtrate and mix with *Madhu* (Honey) while lukewarm and use immediately.

Dose: A stream of lukewarm decoction to be poured in eyes

Important Therapeutic Uses: Abhiṣyanda, Aksiroga

9. TAILA

Definition:

Tailas are preparations in which taila is boiled with prescribed *Kaṣāyas* (Decoction) and *Kalkas* of drugs according to the formula. This process ensures absorption of the active therapeutic properties of the ingredients used.

General Method of preparation:

1. There are generally three essential components for the preparation of *Sneha* (*Gṛīta* or *Taila*) viz: -
 - (i) *Drava* (a liquid which may be one or more as *Kaṣāya*, *Svarasa*, *Dugdha*, *Mastu*, etc.);
 - (ii) *Kalka* (a fine paste of the drug(s));
 - (iii) *Sneha Dravya* (*Taila*, *Mūrcchita Taila*¹ etc.)
2. Generally, unless otherwise mentioned in the text, if *Kalka* is one part by weight, *Sneha* should be four parts and the *Drava-Dravya* should be sixteen parts. Exceptions are:
 - (i) Where no *Drava* is prescribed, four parts of water is added to one part of *Sneha*; the *Kalka* is one fourth the weight of the *Sneha*.
 - (ii) Where *Drava Dravya* is *Kvātha Kalka* should be one-sixth of *Sneha*.
 - (iii) Where *Drava Dravya* is *Svarasa*, *Kṣīra*, *Takra*, *Dadhi* the *Kalka* should be one-eighth of *sneha* and then 4 times water is added for good *Pāka*.
 - (iv) Where the number of *Drava Dravyas* is four or less than four, each *Drava* has to be taken four times the weight of *Sneha*.
 - (v) Where the number of *Drava Dravyas* are five or more, each *Drava* will be equal in weight to the *Sneha*.
 - (vi) If in a preparation, no *Kalka Dravya* is prescribed, then the drugs of the *Kaṣāya* may be used as *Kalka*.
3. The *Kalka* and the *Drava* are mixed together, *Sneha* is then added boiled on mild fire and stirred well continuously so that the *Kalka* is not allowed to adhere to the vessel. Sometimes, the *Drava-Dravyas* are directed to be added one after another as the process of boilling is continued till the *Drava-Dravyas* added earlier has evaporated.
4. When all the *Drava-Dravyas* have evaporated, the moisture in the *Kalka* will also begin to evaporate; at this stage, it has to be stirred more often and carefully to ensure that the *Kalka* does not stick to the bottom of the vessel. The *Kalka* is taken out of the ladle and tested from time to know the condition and stage of the *Pāka*.
5. There are three stages of *Pāka*:
 - (i) *Mṛdu Pāka*
 - (ii) *Madhyama Pāka*, And
 - (iii) *Khara Pāka*

In *Mṛdu Pāka*, *Kalka* is waxy and when rolled between the fingers rolls like lac without sticking. In *Madhyama Pāka*, *Kalka* is soft, non-sticky and rolls between fingers and when put in fire burns without any cracking noise. A further degree of heating leads to *Khara Pāka*, which is slightly hard. Any further

heating will lead to *Dagdha Pāka* and the *Sneha* becomes unfit for use. When the *Taila* attains the correct *Pāka* stage froth comes out.

6. In the *Sneha* group *Śarkara*, if mentioned is added in fine powder form to the final product when cool.

7. Where the *Pāka* is to be done with *Kvātha*, *Svarasa*, *Dugdha* and *Māṁsarasa*, etc., the *Pāka* is to be done with these *Dravas* separately in the above order. The period of *Pāka*² with various *Dravyas* should be as below:

(i) <i>Kvātha, Āranāla, Takra</i> etc.	5 days
(ii) <i>Svarasa</i>	3 days
(iii) <i>Dugdha</i>	2 days
(iv) <i>Māṁsarasa</i>	1 day

8. *Pātrapāka*: *Pātrapāka* is the process by which the *Sneha* is flavoured or augmented by certain soluble or mixable substances. The powders of the drugs are placed in the vessel into which fairly warm *Sneha* is filtered.

9. *Mṛdupāka Sneha* is used for *Nasya*; *Madhyamapāka* is used for *Pāna*, *Vasti*, etc.; *Kharapāka Sneha* is used only for *Abhyāṅga*.

10. In the beginning the boiling should be on mild fire (*Mṛdvagni*) and in the end also it should be only on mild (*Mṛdvagni*) fire.

11. Whenever *Lavaṇas* and *Kṣāras* are used in these preparations, they are added to the *Sneha* and then strained.

Characteristics:

Taila may depict the colour, odour and taste of drugs used. When considerable quantity of milk is used in the preparation, the oil becomes thick due to *Gṛhṛta* and in cold season may condense further.

Preservation:

Tailas are to be stored in glass or suitable containers.

Method of use:

Tailas are generally used for *Abhyāṅga*. some of them are also used internally and in Ayurvedic texts various types of *Anupānas* are described for this purpose. When no such *Anupāna* is mentioned it should be taken with warm water or warm milk.

10. VATĪ AND GUTIKĀ

Definition

Medicines prepared in the form of tablet or pills are known as *Vatī* and *Gutikā*. These are made of one or more drugs of plant, animal or mineral origin.

Method of preparation

The drugs of plant origin are dried and made into fine powders, separately. The minerals are made into *Bhasma* or *Sindūra*, unless otherwise mentioned. In cases where *Pāradā* and *Gandhaka* are mentioned, *Kajjalī* is made first and other drugs are added, one by one, according to the formula. These are put into a *Khalva* and ground to a soft paste with the prescribed fluids. When more than one liquid is mentioned for grinding, they are used in succession. When the mass is properly ground and is in a condition to be made into pills, Sugandha *Dravyas*, Like *Kastūrī*, *Karpūra*, which are included in the formula, are added and ground again. The criterion to determine the final stage of the formulation before making pills is that it should not stick to the fingers when rolled. Pills may be dried in shade or in sun as specified in the texts. In cases where sugar or jaggery (*Guḍa*) is mentioned, *Pāka* of these should be made on mild fire and removed from the oven. The powders of the ingredients are added to the *Pāka* and briskly mixed. When still warm, *Vatikas* should be rolled and dried in shade.*

Characteristics

Pills and *Vatīs* should not lose their original colour, smell, taste and form.

Storage

Pills made of plant drugs when kept in air tight containers can be used for two years. Pills containing minerals can be used for an indefinite period. When sugar, salt or *Kṣāra* is an ingredient, the pills should be kept away from moisture.

* Those *Vatīyoga* containing *Vatsanābha*, *Ahiphena*, *Dhattūra*, *Malla*, *Manahśilā*, *Haratāla*, *Arka* or *Tāmra* as one or more ingredient, may be prepared in the form of tablets. So, the medicines may be dispensed in the prescribed dose. It will save the patients from untoward effects of higher doses of these medicines.

VATĪ AND GUTIKĀ				
	Formulation	Book & Chapter	Verse No.	Page No
1.	Śvāsāntaka Vatī (Veterinary)	Karikalpalatā		84

10:1 Śvāsāntaka Vatī (Veterinary) (Karikalpalatā, Page No. 84)

1.	Kisamisa (Drākṣā)	<i>Vitis vinifera</i>	Dr. Fr. (Seedless)	1 part
2.	Munakkā (Drākṣā)	<i>Vitis vinifera</i>	Dr. Fr.	1 part
3.	Pīpala (Pippalī)	<i>Piper longum</i>	Fr.	Cū.
4.	Kālī Miraca (Marica)	<i>Piper nigrum</i>	Fr.	Cū.
5.	Soṁpha (Miśreyā)	<i>Foeniculum vulgare</i>	Fr.	Cū.
6.	Adarakha (Śunṭhī)	<i>Zingiber officinale</i>	Rz.	Cū.
7.	Sapheda Jīrā (Svetajīraka)	<i>Cuminum cyminum</i>	Fr.	Cū.

8.	Bihīdānā	<i>Cydonia oblonga</i>	Sd.	Cū.	1 part
9.	Mulahatī (Yaṣṭī)	<i>Glycyrrhiza glabra</i>	Rt. & Stolon	Cū.	1 part
10.	Babūla (Babbūla)	<i>Acacia nilotica</i>	Exd.		Q.S.

Specific Method of Preparation: Powder ingredient No. 1-9, mix with the paste of ingredient No. 10 and roll into *Vaṭī* of 12 g and dry.

Dose: 12 g twice a day

Anupāna: Water

Important Therapeutic Uses: Parśukā Roga

APPENDICES

APPENDIX-1

1(A) Ingredient drugs of animal origin (in alphabetical order of official names)

Sl. No.	Official name	Alternate name(s) appearing in formulary	Product/Form appearing in the Formulary	Scientific/English/Zoological nomenclature
1.	Gajakarīṣa			Dried excreta of healthy elephant
2.	Goghṛta	Ghr̥ta, Sarpi		Clarified butter from cow's milk
3.	Gomaya	Gau Gobara, Gobara	Sv.	Cow's dung
4.	Gomūtra			Cow's urine
5.	Hastimūtra			Elephant's urine
6.	Lākṣā			Encrustations on lac insect (<i>Laccifer lacca</i>)
7.	Madhu	Kṣaudra, Māksika, Māksikā		Honey
8.	Navanīta			Butter
9.	Vājjikarīṣa			Dried excreta of healthy horse

1(B) Ingredient drugs of animal origin (in alphabetical order of Scientific/Zoological binomial nomenclature)

Sl. No.	Scientific/English/Zoological nomenclature	Official name	Product/Form appearing in the Formulary
1.	Butter	Navanīta	
2.	Clarified butter from cow's milk	Goghṛta	
3.	Cow's dung	Gomaya	Sv.
4.	Cow's urine	Gomūtra	
5.	Dried excreta of healthy elephant	Gajakarīṣa	
6.	Dried excreta of healthy horse	Vājikarīṣa	
7.	Elephant's urine	Hastimūtra	
8.	Encrustations on lac insect (<i>Laccifer lacca</i>)	Lākṣā	
9.	Honey	Madhu	

DRAFT

APPENDIX-2

2(A) Ingredient drugs of mineral origin (in alphabetical order of official names)

Sl. N o.	Official Name	Alternate name(s) appearing in the formulary	Product/Form appearing in the formulary	Scientific name/ English equivalent	Official substitute
1.	Audbhida Lavaṇa		Cū.	Reh or efflorescent salt	Saindhava Lavaṇa
2.	Gairika	Gerū	Cū.	Red ochre	
3.	Gandhaka		Kl.	Sulphur	
4.	Haritāla	Haratāla, Tabākiyā Haratāla	Kl.	Orpiment	
5.	Kāsīsa	Kasīsa	Kl.	Green Vitriol	
6.	Malla	Manasila Sapheda	Kl.	Arsenic trioxide	
7.	Manahśilā	Manasila, Manasīla	Kl.	Realgar	
8.	Romaka Lavaṇa	Sāmbhara Namaka	Cū.	Sāmbhara Salt	Sauvarcala Lavaṇa
9.	Saindhava Lavaṇa	Lavaṇa, Saindhava, Seṁdhā Namaka	Cū.	Rock Salt	
10.	Sāmudra Lavaṇa	Khārī Namaka	Cū.	Sea Salt	
11.	Sauvarcala Lavaṇa	Kālā Namaka, Samcara Namaka	Cū.	Black Salt	
12.	Sindūra		Kl.	Lead oxide	
13.	Sphaṭikā	Phiṭakarī	Cū.	Alum	
14.	Svarjīkṣāra	Sajjī, Sajjīkhāra, Suvarcikā	Cū.	Water soluble ash of <i>Capparis decidua</i>	Sodium bicarbonate
15.	Taṅkana	Suhāgā	Cū.	Borax	
16.	Vīḍa Lavaṇa*		Cū.		Narasāra
17.	Yavakṣāra	Javākhāra	Kṣāra	Water soluble ash of <i>Hordeum vulgare</i>	

*Identity yet to be confirmed

2(B) Ingredient drugs of mineral origin (in alphabetical order of Scientific name / English equivalent)

Sl. No.	Scientific name / English equivalent	Official Name	Product/Form appearing in the formulary
1.	Water soluble ash of <i>Hordeum vulgare</i>	Yavakşāra	Kşāra
2.	Alum	Sphaṭikā	Cū.
3.	Arsenic trioxide	Malla	Kl.
4.	Black Salt	Sauvarcala Lavaṇa	Cū.
5.	Borax	Taṅkaṇa	Cū.
6.	Water soluble ash of <i>Capparis decidua</i>	Svarjīkşāra	Cū. Kl.
7.	Green Vitriol	Kāśīsa	Kl.
8.	Lead oxide	Sindūra	Kl. Kv. Cū.
9.	Orpiment	Haritāla	Kl.
10.	Realgar	Maṇahśilā	Kl.
11.	Red ochre	Gairika	Cū.
12.	Reh or efflorescent salt	Audbhida Lavaṇa	Cū.
13.	Rock Salt	Saindhava Lavaṇa	Cū.
14.	Sāmbhara Salt	Romaka Lavaṇa	Cū.
15.	Sea Salt	Sāmudra Lavaṇa	Cū.
16.	Sulphur	Gandhaka	Kl.
17.		Vida Lavaṇa*	Cū.

*Identity yet to be confirmed

APPENDIX-3**3(A) Ingredient drugs of plant origin (in alphabetical order of official names, followed by part(s) used)**

Sl. No.	Official Name	Alternate name appearing in the formulary	Botanical Names	Part Used
1.	Ajamodā	Ajamoda	<i>Cyclospermum leptophyllum</i> (Pers.) Sprague Syn. <i>Apium leptophyllum</i> (Pers.) Muell.	Fr.
2.	Āmalakī	Āmalaka, Āṁvalā	<i>Phyllanthus emblica</i> L. Syn. <i>Emblica officinalis</i> Gaertn.	P.
3.	Amlavetasa		<i>Elaeagnus rhamnooides</i> (L.) A.Nelson	Fr.
4.	Aparājītā	Girikarṇikā	<i>Clitoria ternatea</i> L.	Pl.
5.	Aparājītā	Girikarnikā	<i>Clitoria ternatea</i> L.	Rt.
6.	Āragvadha	Rājavrkṣa	<i>Cassia fistula</i> L.	Fr. Pp.
7.	Arka	Āka	<i>Calotropis procera</i> (Aiton) Dryand.	L.
8.	Arka	Arkapatra	<i>Calotropis procera</i> (Aiton) Dryand.	Lf.
9.	Arka	Āka	<i>Calotropis procera</i> (Aiton) Dryand.	Rt.

Sl. No.	Official Name	Alternate name appearing in the formulary	Botanical Names	Part Used
10.	Aśvagandhā	Nāgaudī Asagandha	<i>Withania somnifera</i> (L.) Dunal	Rt.
11.	Ativisā	Ativiṣa	<i>Aconitum heterophyllum</i> Wall. ex Royle	Rt.
12.	Babbūla	Babūla	<i>Acacia nilotica</i> (L.) Delile	Exd.
13.	Babbūla	Babūla	<i>Acacia nilotica</i> (L.) Delile	St. Bk.
14.	Badarī	Vadarīphala	<i>Ziziphus jujuba</i> Mill.	Fr.
15.	Bākucī		<i>Cullen corylifolium</i> (L.) Medik. Syn. <i>Psoralea corylifolia</i> L.	Fr.
16.	Bandāka	Baṇḍāra	<i>Vanda tessellata</i> (Roxb.) Hook. ex G.Don Syn. <i>Vanda roxburghii</i> R.Br.	Pl.
17.	Bhallātaka		<i>Semecarpus anacardium</i> L.f.	Fr.
18.	Bibhītaka	Bahedā, Vibhītaka	<i>Terminalia bellirica</i> (Gaertn.) Roxb.	P.
19.	Bihīdānā		<i>Cydonia oblonga</i> Mill.	Sd.
20.	Bījapūra	Bījapūraka	<i>Citrus medica</i> L.	Fr.
21.	Bilva		<i>Aegle marmelos</i> (L.) Correa	Fr. Pp.
22.	Bilva		<i>Aegle marmelos</i> (L.) Correa	St. Bk.
23.	Brāhmī		<i>Bacopa monnieri</i> (L.) Wettst.	Pl.
24.	Bṛhatī	Bṛhatīphala	<i>Solanum violaceum</i> Ortega Syn. <i>Solanum indicum</i> L.	Fr.
25.	Bṛhatī	Bhaṭakāṭaiyā	<i>Solanum violaceum</i> Ortega Syn. <i>Solanum indicum</i> L.	Pl.
26.	Cakramarda	Pamāḍa, Paṁvāḍa, Pavāḍa	<i>Senna tora</i> (L.) Roxb. Syn. <i>Cassia tora</i> L.	Sd.
27.	Cirabilva	Pūtikā	<i>Holoptelea integrifolia</i> Planch	St. Bk.
28.	Citraka	Cīṭā, Pāṭhī	<i>Plumbago zeylanica</i> L.	Rt.
29.	Citraka		<i>Plumbago zeylanica</i> L.	Rt. Bk.
30.	Dāḍima		<i>Punica granatum</i> L.	Fr. R.

APPENDIX-4

PARIBHĀṢĀ

(Description/Glossary of Technical terms)

Kalka:

Kalka is the fine paste of macerated fresh plant material. (*Paribhāṣā Prabandha*)

Kvātha/Kaṣāya:

Kvātha or Kaṣāya is the filtered liquid obtained by boiling powder of drug(s) in proportion of 4, 8 or 16 [*Mṛdu Dravya*: 4, *Madhyama Dravya*: 8 and *Kaṭhina Dravya*: 16 respectively] times of water and reduced to one-fourth. (*Śārṅgadhara Saṃhitā* - II - 6/1)

Cūrṇa:

The fine sieved powder of well dried drug(s) is called *Cūrṇa*. (*Śārṅgadhara Saṃhitā* - II - 1/21-23)

Puṭapāka Svarasa:

It is a kind of procedure, where juice of fresh green herb will be obtained by the process of *Puṭapāka*. Bundle the *Kalka* of green plant material in leaves of *Kāśmarī*, *Vaṭa*, *Jambū* etc., and cover with clay in layers of about 2 cm thickness. Dry and place amidst fire till becomes reddish. Open the bundle and strain the juice from *Kalka* through a *muslin cloth*.

(*Śārṅgadhara Saṃhitā* - II - 1/21-23)

Svarasa:

The liquid part of fresh macerated plant material obtained by pressing through a fresh, *muslin cloth* is called as *Svarasa*. (*Śārṅgadhara Saṃhitā* - II - 1/2)

Hima Kaṣāya:

Hima Kaṣāya is the extractive obtained by straining of 48 g [] of powdered drug(s) soaked in 288 ml [6 parts] of water overnight. (*Śārṅgadhara Saṃhitā* - II - 4/1)

Phāṇṭa:

Phāṇṭa is the extractive obtained by pouring four times of boiling water on the powdered drug(s) and strained when cooled. (*Paribhāṣāpradīpa* 2/26)

Śodhana:

Śodhana is the process which removes the impurities to some extent and helps in increasing the therapeutic values of the drugs.

APPENDIX-5

ŚODHANA

(Description/Glossary of Procedures)

5:1 BHALLĀTAKA ŚODHANA

(Rasāmrta, Pariśiṣṭa 8; Page 147)

भल्लातकान् सुपक्वांस्तु गोमूत्रे दिनसप्तकम् ।
तथा च गव्यपयसि वासयेद् दिनसप्तकम् ॥
ततो घृष्टवेष्टिकाचूर्णः क्षालयित्वाऽम्भसा पुनः ।
संशोष्य मारुतेनाथ वृत्तं छित्वा प्रयोजयेत् ॥
(रसामृत, परिशिष्ट C; पृष्ठ १४७)

- | | | | | |
|----|--------------|------------------------------|-----|--------|
| 1. | Bhallātaka | <i>Semecarpus anacardium</i> | | |
| 2. | Gomūtra | Cow's urine | Fr. | 1 part |
| 3. | Godugdha | Cow's milk | | QS |
| 4. | Iṣṭikā cūrṇa | Brick powder | | QS |
| 5. | Water | | Cū. | QS |

Method of Śodhana:

Take *Bhallātaka*, remove the attached thalamus and soak in *Gomūtra* for 7 days. Replace *Gomūtra* every 24 h with fresh *Gomūtra*. After 7 days, rinse the *Bhallātaka* twice with water, to wash off the *Gomūtra*. Soak *Bhallātaka* in *Godugdha* for 7 days, replacing *Godugdha* every 24 h with fresh *Godugdha*. After 7 days, rinse the *Bhallātaka* 2 or 3 times with water to wash off the *Godugdha*. Put the *Bhallātaka* in a thick jute bag containing coarse brick powder and rub carefully, with a view to reduce the oil content in *Bhallātaka*. Wash the processed seeds with water and dry.

5:2 GAIRIKA ŚODHANA

(Rasaratnasamuccaya, Adhyāya 3; 49)

गैरिकं तु गवां दुधैर्भावितं शुद्धिमृच्छति ॥४९॥

(रसरत्नसमुच्चय, अध्याय ३, ४९)

1.	Gairika	Red ochre	1 Part
2.	Godugdha	Cow's milk	QS for 3 Bhāvanā

Method of Śodhana:

Bhāvanā is given with *Godugdha* three times.

5:3 GANDHAKA ŚODHANA

(Rasāmr̥ta, Adhyāya 2; 3)

गव्ये पयसि ग-धं तु भृङ्गराजरसेऽथवा ।
रसपर्फिकाप्रोक्तविधानेन विशेष्यत् ॥३॥
(रसामृत, अध्याय २, ३)

1.	Gandhaka	Sulphur	1 part
2.	Godugdha or Bhṛīngarāja Svarasa	Cow's milk <i>Eclipta alba</i>	QS QS

Method of Śodhana:

Melt small pieces of *Gandhaka* in an iron pan smeared with *Goghṛita* and pour in to a pot containing ingredient No. 02. Collect after cooling. Repeat the process for seven times. At the end of the seventh process, wash and dry the material.

5:4 MALLA (GAURĪPĀṢĀNA) ŚODHANA

(Rasāmr̥ta, Adhyāya 4; 1)

गवां दुधेऽथवा त्वाजे कारवेलीरसेऽथवा ।
द्वियामं स्वेदितः शुद्धो गौरीपाषाणको भवेत् ॥१॥
(रसामृत, अध्याय ४, १)

1.	Gaurīpāṣāna (Malla)	Arsenic trioxide	1 part
2.	Godugdha or Ajādugdha or Kāravellī rasa	Cow's milk Goat's milk <i>Momordica charantia</i>	QS for svedana QS for svedana QS for svedana
		Fr.	SV.

Method of Śodhana:

Small Pieces of *Malla* are bundled in a cloth bag and hanged in the vessel (*Dolāyantra*) filled with with ingredients no. 2 and boiled for 6 h.

5:5 HARITĀLA ŚODHANA

(Rasaratnasamuccaya, Adhyāya 3; 75)

स्विनं कूष्माण्डतोये वा तिलक्षारजलेऽपि वा ।
तोये वा चूर्णसंयुक्ते दोलायन्त्रेण शुद्ध्यति ॥
(रसरत्नसमुच्चय, अध्याय ३; ७५)

1.	<i>Haritāla</i>	Orpiment	1 part
2.	<i>Kūṣmāṇḍa</i> Toya or <i>Tilakṣāra</i> Jala or <i>Cūrṇodaka</i>	<i>Benincasa hispida</i> Alkaline produce of <i>Sesamum indicum</i> ash	Fr. Sv. Kṣāra QS

Take small pieces of *Haritāla*, bundle in clean *muslin cloth*, suspend in a *Dolāyantra* containing any

one of the above liquid media. Boil for 3 h, dry in sun rays and preserve for further purpose.

5:6 HIṄGU ŚODHANA

(Rasataraṅgiṇī, Adhyāya 24; 578)

1. Rāmaṭha (Hiṅgu)	<i>Ferula foetida</i>	O.R.	QS
2. Ājya (Goghṛta)	Clarified butter from cow's milk		QS

Method of preparation: Prepare fine powder of *Hiṅgu* and fry it in sufficient amounts of *Goghṛta*, till it becomes crisp.

5:7 KĀŚIŚA ŚODHANA

(Rasāmṛta, Adhyāya 3; 158)

काशीशं भृङ्गनीरेण त्रिवारं भावितं शुचि ॥१५८॥
(रसामृत, अध्याय ३, १५८)

1. Kāśīśa	Green vitriol	Pl.	1 part
2. Bhṛṅga nīra (Bhṛṅgarāja)	<i>Eclipta alba</i>	Sv.	QS

Method of Śodhana:

Powder of *Kāśīśa* is given 3 *Bhāvanā* with *Bhṛṅgarāja Rasa*.

5:8 MANAHŚILĀ ŚODHANA

(Rasaratnasamuccaya, Adhyāya 3; 96)

अगस्त्यपत्रतोयेन भाविता सप्तवारकम् ।
शृङ्गवेररसैवर्जपि विशुद्ध्यति मनःशिला ॥९६॥
(रसरत्नसमुच्चय, अध्याय ३, ९६)

1. Manahśilā	Realgar	Lf.	1 part
2. Agastyapatra (Agastya) svarasa	<i>Sesbania grandiflora</i>	Sv.	QS
3. Śṛṅgavera rasa (Ārdraka)	<i>Zingiber officinale</i>	Rz.	QS

Method

Bhāvanā is to be given seven times.

5:9. SPHATIKĀ ŚODHANA

(Āyurvedaprakāśa, Adhyāya 2; 258)

स्फटिका निर्मला श्वेता श्रेष्ठा स्यान्छोधनं क्वचित् ।
न दृष्टं शास्त्रतो लोका वह्नावुत्कुल्लयन्ति हि ॥
(आयुर्वेदप्रकाश, अध्याय २, २५८)

Method

It is to be heated in an iron pan till it melts and solidifies.

5:10 TAṄKAṄA ŚODHANA

(Āyurvedaprakāśa, Adhyāya 2; 244)

अतस्तं शोधयेदेव वह्नावुत्कुल्लतः शुचिः ।
(आयुर्वेदप्रकाश, अध्याय २, २४४)

Method of Śodhana:

Small pieces of *Taṅkana* are placed in a vessel on fire and collected when dehydrated.

5:11 VATSANĀBHA ŚODHANA

(Rasāmr̥ta, Parīṣiṣṭa 8; Page 145)

विषं तु खण्डशः कृत्वा वस्त्रखण्डेन बन्धयेत् ।

गोमूत्रमध्ये निक्षिप्य स्थापयेदातपे त्र्यहम् ॥

गोमूत्रं तु प्रदातव्यं नूतनं प्रत्यहं बुधैः ।

त्र्यहेऽतीते तदुद्धृत्य क्षालयित्वा विशोषयेत् ।

(रसामृत परिशिष्ट ८, पृष्ठ १४५)

1. Viṣa (Vatsanābha)
2. Gomūtra

Aconitum chasmantum
Cow's urine

Rt.

1 part
QS

Method of Śodhana:

Small pieces of *Vatsanābha* are bundled in thin muslin cloth and soaked in *Gomūtra* for three days, replacing the latter everyday. Then they are washed and dried.

5:12 VIJAYĀ ŚODHANA

(Rasāmr̥ta, Parīṣiṣṭa 8; Page 147)

विजयां वस्त्रबद्धां तु जलैः प्रक्षालयेद् बुधः ।

हरिद्वर्णं जलं यावत् ततः शुष्कां प्रयोजयेत् ॥

(रसामृत, परिशिष्ट ८; पृष्ठ १४७)

1. Vijayā
2. Jala

Cannabis sativa

Lf.

1 part
QS

Method of Śodhana:

Vijayā is put in a muslin bag and washed in water till free from turbidity and then dried.

APPENDIX-6
THERAPEUTIC INDEX
(Formulations segregated as per therapeutic indications)

Important Therapeutic Uses	Formulation No.	Name of the Formulation

Tvacā roga	9:2	Mahāmaricādi Taila (Veterinary)
Tvagdoṣa	2:1	Kuṭajamadhuśigrvādi Āsava (Veterinary)
Tvagvikāra	9:5	Śunṭhyādi Taila (Veterinary)
Udarakṛmi	3:9	Kṛmināśaka Piṇḍa (Veterinary)
Udararujā	5:3	Haridrādi Ghṛta (Veterinary)
Udaraśūla	3:25	Udarāmṛta Cūrṇa (Veterinary)
Udarāvaraṇa Śotha	3:20	Śothanāśaka Śunṭhyādi Yoga (Veterinary)
Udaravikāra	3:25	Udarāmṛta Cūrṇa (Veterinary)
Udāvarta	3:5	Hīngumaricādi Cūrṇa (Veterinary)
	3:23	Śvāsahara Yoga (Veterinary)
Utsāhavardhana	6:3	Madhukādi Kvātha Cūrṇa (Veterinary)
Vājikara	3:15	Picumandalaśunādi Kavala (Veterinary)
Varnya	3:12	Manahprasādakara Yoga (Veterinary)
Vāta-Gulma	3:15	Picumandalaśunādi Kavala (Veterinary)
	3:16	Picumandapatrādi Cūrṇa (Veterinary)
Vātaja Ajīrṇa	3:18	Saindhavavijayādi Cūrṇa (Veterinary)
Vātaroga	5:2	Dvitīya Pañcatikta Ghṛta (Veterinary)
Vāta-Udāvarta	3:15	Picumandalaśunādi Kavala (Veterinary)
	3:16	Picumandapatrādi Cūrṇa (Veterinary)
Vibandha	3:4	Haridrādi Kavala (Veterinary)
Viśavikāra	3:26	Viśanāśaka Yoga (Veterinary)
Vraṇa	7:2	Lohitādi Lepa (Veterinary)

APPENDIX-7

DISEASES/TECHNICAL TERMS AND THEIR ENGLISH EQUIVALENTS

Sl. No.	Diseases/Technical Terms	English equivalent
1.	Abhighāta	trauma
2.	Abhiṣyanda	conjunctivitis
3.	Ādhmāna	abdominal distension
4.	Agnidīpana	digestion and metabolism enhancing
5.	Ajīrnā	indigestion
6.	Akṣiroga	ophthalmic diseases
7.	Ānāha	barborygmus with distention
8.	Anulomana	mild purgative action / regularizing physiological movement
9.	Balakṣaya	weakness / diminished strength
10.	Balya	strength, stamina and immunity promoter
11.	Bṛmhāṇīya	anabolic / bulk promoting
12.	Carmadala Kuṣṭha	type of skin disease
13.	Daurbalya	weakness / debility
14.	Dvandvaja Rogā	disease caused by vitiation of any two doṣa
15.	Galagānda	goitre
16.	Galagraha	throat spasm / choking sensation in throat
17.	Gulma	a type of lump
18.	Hikkā	singultus/hiccup
19.	Hṛdya	beneficial for heart / palatable and pleasing to mind
20.	Jīvanīya	vitality enhancer
21.	Jvara	fever
22.	Kāmajanya Jvara	fever due to excessive desire
23.	Kanḍū	pruritis
24.	Kanṭharoga	disorders of throat
25.	Kanṭhaśōtha	swelling of throat region
26.	Kapharoga	diseases caused by kapha doṣa
27.	Kāsa	cough/tussis
28.	Koḍha	type of skin diseases/vitiligo
29.	Koṣṭhakṛmi	worm infestation in abdomen (or intestines)
30.	Kṛmi	worm infestation
31.	Kṛmija Śiroroga	headache due to worm infestation
32.	Kṛtrima Viṣa	artificial poison
33.	Kṣaya	emaciation/consumption
34.	Kuṣṭha	various skin diseases / integumentary disease
35.	Kuṣṭha without Vraṇa	various skin diseases / integumentary disease without wound/ulcer/sore
36.	Manahprasāda	calmness of mind / mental cheerfulness
37.	Mandāgni	depressed/weak state of agni (digestive power) / diminution of agni / subdued digestive power
38.	Mūtrasaṅga	retention of urine / obstruction to passage of urine

Sl. No.	Diseases/Technical Terms	English equivalent
39.	Parśukā Roga	disease of lower respiratory tract
40.	Phoḍā	boil
41.	Pittadoṣa	diseases caused by pitta doṣa
42.	Pittaroga	diseases caused by pitta doṣa
43.	Plīhavṛddhi	enlargement of spleen / splenomegaly
44.	Prameha	excessive urination / polyuria
45.	Raktaja Gulma	pseudocyesis
46.	Sannipātaja Roga	disease caused by all three doṣa
47.	Sarvaroga	all diseases
48.	Ślaiśmika Kāsa	cough/tussis due to kapha doṣa
49.	Śotha	oedema/inflammation/swelling
50.	Śūla	colicky pain/ abdominal colic
51.	Śvāsa	dyspnoea / difficulty in breathing
52.	Śvāsāvarodha	obstruction to breathing
53.	Tejovardhana	glow enhancer
54.	Tejovṛddhi	glow enhancement
55.	Tvacā roga	skin disease
56.	Tvagdoṣa	skin disorder
57.	Tvagvikāra	skin disorder
58.	Udarakṛmi	worm infestation in abdomen
59.	Udararujuā	abdominal pain
60.	Udaraśūla	colicky pain in the abdomen
61.	UdarāvaraṇaŚotha	inflammation of peritoneum
62.	Udaravikāra	digestive disorders
63.	Udāvarta	obstipation
64.	Utsāhavardhana	enthusiasm enhancer
65.	Vājīkara	aphrodisiac
66.	Varnya	complexion promoting / normal skin colour restorer / complexion enhancer
67.	Vāta-Gulma	a type of lump due to vāta doṣa
68.	Vātaja Ajīrṇa	indigestion due to vāta doṣa
69.	Vātaroga	diseases caused by vāta doṣa
70.	Vāta-Udāvarta	obstipation due to vāta
71.	Vibandha	constipation
72.	Viśavikāra	disease/disorder due to poisoning
73.	Vraṇa	wound/ulcer/sore

APPENDIX-8
INDEX OF FORMULATIONS (Alphabetical)

Formulation No.	Formulation Name	Dosage form No.	Dosage Form
3:1	Agnipradīpaka Piṇḍa (Veterinary)	3	Cūrṇa
3:2	Agnisandīpaka Cūrṇa (Veterinary)	3	Cūrṇa
7:1	Arkapatrādi Lepa (Veterinary)	7	Lepa
9:1	Bṛhatīphalādi Taila Nasya (Veterinary)	9	Taila
3:3	Bṛhatyādi Lavaṇa Yoga (Veterinary)	3	Cūrṇa
1:1	Citrakatrophalādi Leha (Veterinary)	1	Avaleha
5:1	Dhātakīkeśarādya Ghṛta (Veterinary)	5	Ghṛta
5:2	Dvitīya Pañcatikta Ghṛta (Veterinary)	5	Ghṛta
5:3	Haridrādi Ghṛta (Veterinary)	5	Ghṛta
3:4	Haridrādi Kavala (Veterinary)	3	Cūrṇa
6:1	Haridrādi Yoga (Veterinary)	6	Kvātha Cūrṇa
3:5	Hiṅgumaricādi Cūrṇa (Veterinary)	3	Cūrṇa
3:6	Hiṅgvādi Cūrṇa (Veterinary)	3	Cūrṇa
3:7	Indravārunyādi Cūrṇa (Veterinary)	3	Cūrṇa
3:8	Kaṇkolādi Piṇḍa (Veterinary)	3	Cūrṇa
5:4	Karañjādi Ghṛta (Veterinary)	5	Ghṛta
6:2	Kṛmināśaka Kvātha Cūrṇa (Veterinary)	6	Kvātha Cūrṇa
3:9	Kṛmināśaka Piṇḍa (Veterinary)	3	Cūrṇa
3:10	Kṛtrimaviṣanāśaka Yoga (Veterinary)	3	Cūrṇa
2:1	Kuṭajamadhuśigrvādi Āsava (Veterinary)	2	Āsava
3:11	Laśunādi Cūrṇa (Veterinary)	3	Cūrṇa
7:2	Lohitādi Lepa (Veterinary)	7	Lepa
6:3	Madhukādi Kvātha Cūrṇa (Veterinary)	6	Kvātha Cūrṇa
9:2	Mahāmaricādi Taila (Veterinary)	9	Taila
3:12	Manahprasādakara Yoga (Veterinary)	3	Cūrṇa
9:3	Maricādi Taila (Veterinary)	9	Taila
3:13	Methikādi Piṇḍa (Veterinary)	3	Cūrṇa
3:14	Mūrvādi Yoga (Veterinary)	3	Cūrṇa
9:4	Nimbādi Taila (Veterinary)	9	Taila
6:4	Nimbapatolādi Kvātha Cūrṇa (Veterinary)	6	Kvātha Cūrṇa
5:5	Pañcatikta Ghṛta (Veterinary)	5	Ghṛta
3:15	Picumandalaśunādi Kavala (Veterinary)	3	Cūrṇa
3:16	Picumandapatrādi Cūrṇa (Veterinary)	3	Cūrṇa
8:1	Pippalyādi Netrapariṣeka (Veterinary)	8	Netrabindu and Añjana
6:5	Piṣṭamehāntaka Yūṣa (Veterinary)	6	Kvātha Cūrṇa
3:17	Plīharoganāśaka Piṇḍa (Veterinary)	3	Cūrṇa
3:19	Saindhavādi Piṇḍa (Veterinary)	3	Cūrṇa

Formulation No.	Formulation Name	Dosage form No.	Dosage Form
3:18	Saindhavavijayādi Cūrṇa (Veterinary)	3	Cūrṇa
3:20	Śothonāśaka Śuṇṭhyādi Yoga (Veterinary)	3	Cūrṇa
3:21	Śuṇṭhyādi Kāsanāśaka Cūrṇa (Veterinary)	3	Cūrṇa
9:5	Śuṇṭhyādi Taila (Veterinary)	9	Taila
3:22	Śvāsahara Cūrṇa (Veterinary)	3	Cūrṇa
3:23	Śvāsahara Yoga (Veterinary)	3	Cūrṇa
10:1	Śvāsāntaka Vaṭī (Veterinary)	10	Vaṭī and Guṭikā
4:1	Trikaṭukādi Dhūpana (Veterinary)	4	Dhūpa
6:6	Trivṛtāharidrādi Kvātha Cūrṇa (Veterinary)	6	Kvātha Cūrṇa
3:25	Udarāmrta Cūrṇa (Veterinary)	3	Cūrṇa
3:24	Udaravikāranāśaka Cūrṇa (Veterinary)	3	Cūrṇa
3:26	Viṣanāśaka Yoga (Veterinary)	3	Cūrṇa
6:7	Yavānyādi Kvātha Cūrṇa (Veterinary)	6	Kvātha Cūrṇa

DRAFT

APPENDIX-9

METRIC EQUIVALENT OF CLASSICAL WEIGHTS AND MEASURES

Metric Equivalents of Classical Weights and Measures

The following tables of metric equivalents of weights and measures, linear measures and measurement of time used in the Ayurvedic classics have been approved by the Ayurvedic Pharmacopoeia Committee in consultation with Bureau of Indian Standards (erstwhile Indian Standards Institution).

9.1 WEIGHTS AND MEASURES

9.1.1. General as Per Māgadha Māna in Ayurvedic Classics (unless specified otherwise)

Classical Unit	Metric Equivalent
1 Yava	31.25 mg
4 Yava = 1 Rattī or Guñjā	125 mg
6 Rattī or Guñjā = 1 Māsa	750 mg
4 Māsa = 1 Śāna or Taṅka	3 g
4 Śāna or Taṅka = 16 Māsa = 1 Karṣa	12 g
2 Karṣa = 1 Śukti	24 g
2 Śukti = 1 Pala	48 g
2 Pala = 1 Prasṛti	96 g
2 Prasṛti = 1 Kuḍava	192 g
2 Kuḍava = 1 Mānikā	384 g
2 Mānikā = 1 Prastha	768 g
4 Prastha = 1 Āḍhaka	3 kg 72 g
4 Āḍhaka = 1 Drona	12 kg 288 g
2 Drona = 1 Śūrpa	24 kg 576 g
2 Śūrpa = 1 Dronī (Vāhī)	49 kg 152 g
4 Dronī = 1 Khārī	196 kg 608 g
100 Pala = 1 Tulā	4 kg 800 g
20 Tulā = 1 Bhāra	96 kg

9.1.2. As Per Kāliṅga Māna in Ayurvedic Classics (wherever specified particularly)

Classical Unit	Metric Equivalent
1 Yava	31.25 mg
2 Yava = 1 Rattī or Guñjā	62.5 mg
3 Rattī or Guñjā = 1 Valla	187.5 mg
8 Guñjā = 1 Māsa	500 mg
4 Māsa = 1 Śāna or Taṅka	2 g
6 Māsa = 1 Gadyāṇa	3 g
10 Māsa = 1 Karṣa	5 g
4 Karṣa = 10 Śāna = 1 Pala	20 g
4 Pala = 1 Kuḍava	80 g
2 Kuḍava = 1 Mānikā	160 g
2 Mānikā = 1 Prastha	320 g
4 Prastha = 1 Āḍhaka	1 kg 280 g

4 Āḍhaka = 1 Drona	5 kg 120 g
2 Drona = 1 Śūrpa	10 kg 240 g
2 Śūrpa = 1 Dronī (Vāhī)	20 kg 480 g
4 Dronī = 1 Khārī	81 kg 920 g
100 Pala = 1 Tulā	2 kg
20 Tulā = 1 Bhāra	40 kg

Note:

9.1.3. As applicable for the formulations adopted from Aśvacikitsitam & Aśvavaidyakam

Classical Unit	Metric Equivalent
1 Rattī or Guñjā	125 mg
8 Guñjā = 1 Māṣa	1 g
16 Māṣa = 1 Karṣa (Tolā)	16 g
4 Karṣa = 1 Pala	64 g
4 Pala = 1 Kuḍava	256 g
16 Pala = 1 Prastha	1.024 kg
64 Pala = 1 Āḍhaka	4.096 kg
256 Pala = 1 Drona	16.384 kg

9.1.4. As applicable for the formulations adopted from Karikalpalatā

Classical Unit	Metric Equivalent
1 Rattī or Guñjā	125 mg
1 Māṣa = 8 Guñjā	1 g
1 Paisā	1.5 g
12 Māṣa = 1 Karṣa (Tolā)	12 g
1 Ṭaṅka = 8 Guñjā	3 g
1 Chaṭāṁka	60 g
1 Pāva	240 g
1 Sera	960 g
1 Maṇa = 40 Sera	38.40 kg

In case of liquids, the metric equivalents would be the corresponding litre and milliliter.

9.2 LINEAR MEASURES

Classical Unit	Inches	Metric Equivalent
Yavodara	1/8 of 3/4"	0.24 cm
Aṅgula	3/4"	1.95 cm
Vitasti	9"	22.86 cm
Aratni	10 1/2"	41.91 cm
Hasta	18"	45.72 cm
Nṛpahasta (Rājahasta)	22"	55.88 cm
Vyāma	72"	182.88 cm

9.3 TIME MEASURES

Unit	Equivalent (in hours, minutes & seconds)
------	--

2 Kṣaṇa	= 1 Lava	
2 Lava	= 1 Nimeṣa	
3 Nimeṣa	= 1 Kāṣṭhā	= 4.66 seconds
1 Ghaṭī		= 24 minutes
30 Kāṣṭhā	= 1 Kalā	= 2 minutes 20 seconds
20 Kalā + 3 Kāṣṭhā	= 1 Muhūrta	= 48 minutes
30 Muhūrta	= 1 Ahorātra	= 24 hours
15 Ahorātra	= 1 Pakṣa	= 15 days
2 Pakṣa	= 1 Māsa	= 30 days/1 month
2 Māsa	= 1 Rtu	= 60 days/ Two Months
3 Rtu	= 1 Ayana	= 6 Months
2 Ayana	= 1 Saṁvatsara	= 12 months/1 Year
5 Saṁvatsara	= 1 Yuga	= 5 Years
1 Ahorātra of Deva		= 1 Year
1 Ahorātra of Pitara		= 1 Month

DRAFT

9.4 METRIC SYSTEM MEASURES OF MASS (WEIGHTS)

Measures of mass (weights)

- 1 Kilogram (kg) - is the mass of the International Prototype Kilogram
- 1 Gramme (g) - the 1000th part of 1 kilogram
- 1 Milligram (mg) - the 1000th part of 1 gramme
- 1 Microgram (μg) - the 1000th part of 1 milligram

Measures of capacity (Volumes)

1 Litre (l) is the volume occupied at its temperature of maximum density by a quantity of water having a mass of 1 Kilogram.

1 Millilitre (ml) is the 1000th part of 1 Litre.

The accepted relation between the litre and the cubic centimetre is 1 litre = 1000.027 cubic centimeters.

Relation of capacity of Weight (Metric)

One litre of water at 20° weighs 997.18 grams when weighed in air of density 0.0012 gram per millilitre against brass weights of density 84 grams per millilitre.

Measure of Length

1 Metre (m) is the length of the International Prototype Metre at 0.

- 1 Centimetre (cm) - the 100th part of 1 metre
- 1 Millimetre (mm) - the 1000th part of 1 metre
- 1 Micron (μm) - the 1000th part of 1 millimetre
- 1 Millimicron (nm) - the 1000th part of micron

APPENDIX-10

BIBLIOGRAPHY
